Response to Amendment

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-5, 35 and 36 are rejected under 35 U.S.C. 102(e) as being anticipated by Walker(U.S.Pat.6,453,183)

The applied reference has a common inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention “by another,” or by an appropriate showing under 37 CFR 1.131.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Walker in view of Ford et al.(U.S.Pat.5,943,158). Walker discloses a cerebral oxygenation monitoring system that shows many of the features of the claimed invention but fails to explicitly show a micro-mechanical wavelength modulator. Ford discloses a micro-mechanical , anti-reflection switched optical modulator array and fabrication method that shows a micro-mechanical modulator of an optical source. IT would have been obvious to one of ordinary skill in the art at the time of the claimed invention to use a micro-mechanical modulator as taught by Ford in the device of Walker because micro-mechanical modulators can be used in a wavelength division multiplexing scheme to prevent non-uniform signal transmissions.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Walker in view of Asada et al.(U.S.Pat.6,483,791).). Walker discloses a cerebral oxygenation monitoring system that shows many of the features of the claimed invention but fails to explicitly show a current driven optical modulator. Asada discloses a laser drive integrated circuit and optical disk apparatus using the same that shows a current driven optical modulator. It would have been obvious to one of ordinary skill in the art at the time of the claimed invention to use a current driven optical modulator as taught by

Art Unit: 3742

Asada in the invention of Walker because an output of an A/D converter can drive the modulator.

Allowable Subject Matter

Claims 8-34 are allowed.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Baker, Porges, Misner, Glembocki, Braig, Stark, Walker'562, and Jobsis are cited to show structure and methods similar to the claimed invention.
